

Enabling Environments Around the World

Edward Steinfeld

Professor of Architecture and Director

Center for Inclusive Design and Environmental Access

School of Architecture and Planning

University at Buffalo, SUNY

Dec. 7, 2009

U.N. Convention on the Rights of People with Disabilities

- **Currently being ratified by countries around the world**
- **Accessibility viewed as a basic right**
 - **Buildings “open or provided to the public”**
 - **Housing, especially social housing**
 - **Transportation, including pedestrian environments**
 - **Information and communications**
- **Universal design**
 - **Introduced and defined**
 - **Countries urged to do education and research**

International Classification of Function – WHO (2001)

- **“Bio-social” model**
- **Disablement as a universal experience**
- **Environmental factors have major role in defining disablement**
 - **Barriers and facilitators**
 - **Disabling and enabling environments**
 - **Environment is physical and social**
- **Personal factors play an important role also**
- **Environmental factors not well defined**

Enabling Environments

- **Eliminate discrimination by design or neglect**
- **Enable independence and social participation**
- **Are affordable and achievable**
- **Include domains of policy, design and management**

Evidence for universal design

What is Universal Design?

The design of products and environments to be usable by all people, to the greatest extent possible, without the need for adaptation or specialized design.

Center for Universal Design (circa 1995)

Oxo measuring cup

What is Universal Design?

Improving usability, safety, health and participation in response to the diversity of people and abilities.

E. Steinfeld, 2009

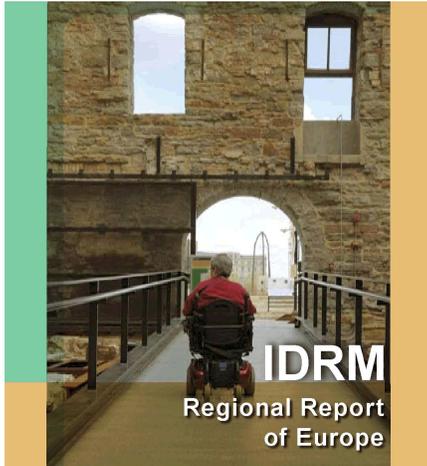

Universal design goals:

- Body fit
- Comfort
- Awareness
- Understanding
- Wellness
- Identity
- Social integration
- Appropriate for context
 - Physical
 - Cultural

The Status of Enabling Environments

- **UN Surveys (1997, 2006)**
 - Surveys of all member nations
 - Filled out by government
- **IDRM Americas (2004), Europe (2005), Asia (2007)**
 - Qualitative reports from limited number of countries
 - Contributing authors

Public Accommodations

Key Issues

- Good progress reported in many countries but also serious gaps
- 43% of countries have **no policies** on accessible public buildings
- 54% have **no standards** for outdoor environments and streets
- 43% have **no standards** for public buildings
- 65% have **no educational programs**
- 58% have **not allocated any funding**
- **Lack of enforcement**

Key Developments

- Convergence on the Developed World (DW) standards
- Informal settlements, refugee camps and rural areas have very serious barriers
- Standards too oriented toward wheeled mobility issues
- Changing wheeled mobility users and technologies
- Developing education and dissemination resources

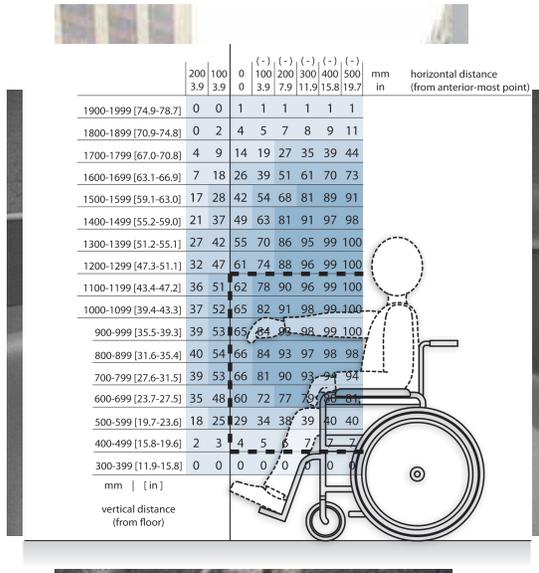

Emergence of Universal Design

- Ramp metaphor for enabling environments
- Building an accessibility culture - first “landing”
- Many creative interpretations emerging
- Challenge of affordability
- Need evidence of effectiveness

Key R&D Needs

- Sensory, cognitive, mental health issues
- Improve standards on wheeled mobility access
- Effectiveness of standards, e.g. tactile warnings
- Usability testing
- Multi-Tier standards
- Extremely low cost solutions

Pittsburgh Children's Museum

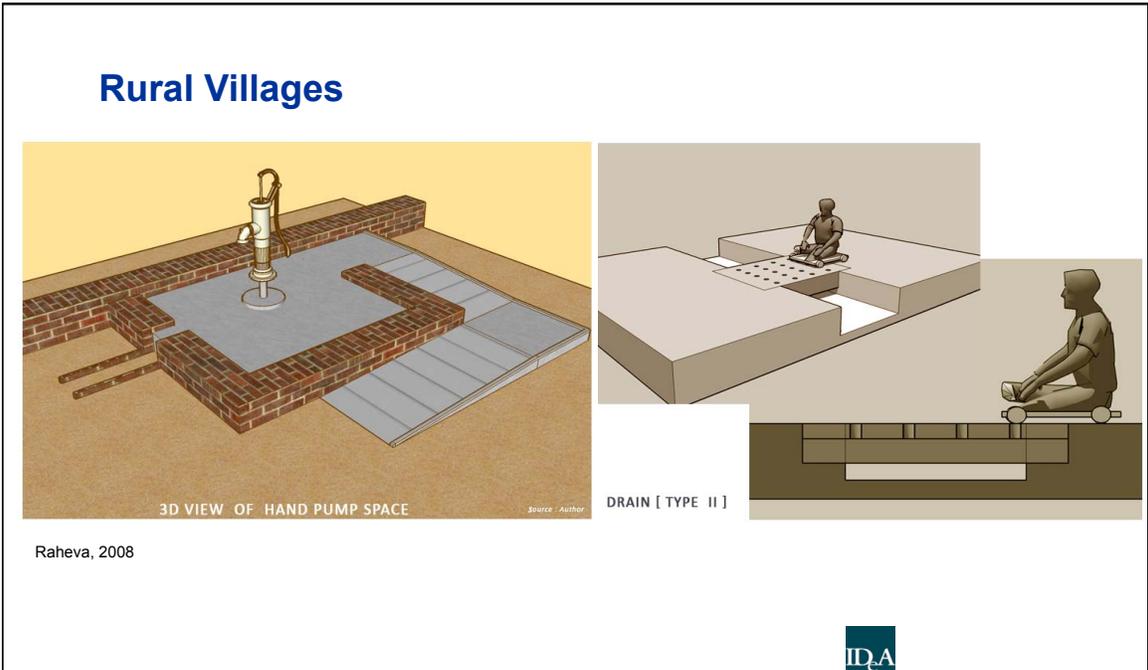

IDA

IDA

Public Transportation

IDA

Key Issues

- Lack of decent public transportation
- Great variation in progress on accessibility
- Major improvement projects around the globe
- Pedestrian access to stations
- Burden of special transport services (STS)
- Larger people and devices
- Developing “Travel Chain” solutions

IDA

Key Developments

- Low floor vehicles with ramp access
- Bus Rapid Transit (BRT)
- Major system retrofits
- International events as a catalyst, e.g. Olympics
- Innovative demand responsive systems
- Improved access to information through technology

Emergence of Universal Design

- Low floor vehicles
- Improving security
- Attracting ridership
- Automated fare payment
- Complete Streets movement

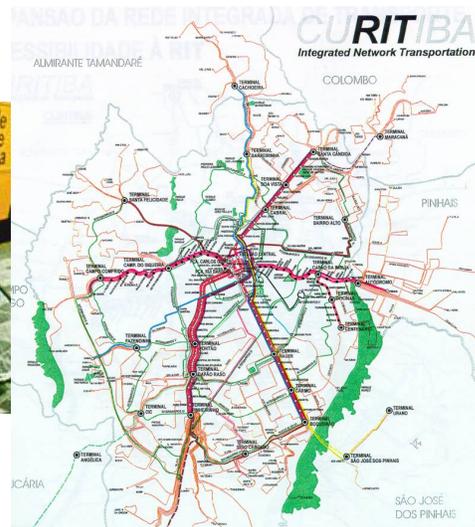

Key R&D Needs

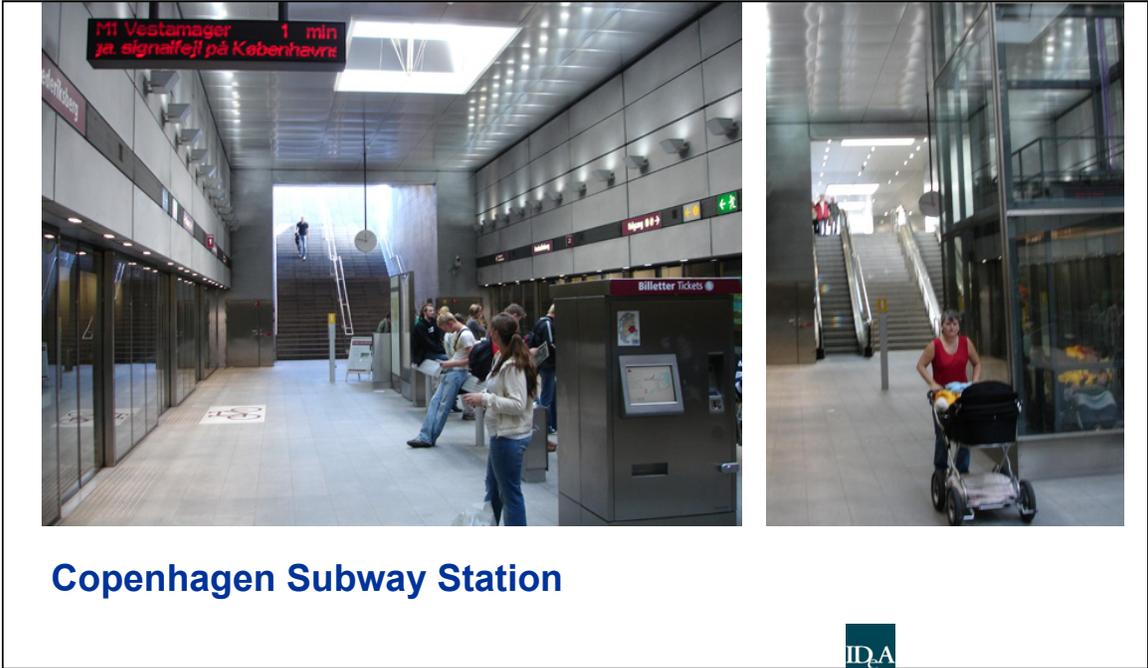

- Evidence base
- The gap
- Wheelchair clearances in low floor busses
- Ramp slope
- UD information systems
- Improving operations

Curitiba's Integrated Transportation System

Vehicle Production Group MPV-1

Housing

Key Issues

- Discrimination in social housing
- Barriers to increasing production of accessible homes
- Choice and self determination
- The existing housing stock
- Cultural appropriateness of independent living
- Increasing adoption of universal design
- The neighborhood context
- Natural disasters and homelessness

Key Developments

- Visitability initiatives
- Homebuilder/renovator education
- Funding home modifications as part of “long term care”
- Walkable community initiatives
- Smart products for aging, e.g. fall detection
- Preferences for aging in place not age segregation
- Service supported community housing

Emergence of Universal Design

- Lifetime Homes in UK
- Lifelong Community Design Initiatives
- New standards – LEED ND and Type C
- Demonstration houses in N. America, UK and Australia

Key R&D Needs

- Evidence based standards
- Smart products that work for everyone
- Emergency housing solutions
- Sanitation solutions for informal settlements and rural housing
- Continuum of services

Lifelong Community Design

Atlanta Regional Commission

Inclusive Design Pattern Book

Demonstration Homes

Bundling Innovations

- Affordable housing
- Design participation
- Sustainable design
- Healthy housing
- Walkable neighborhoods

IDA

The Challenge of Home Mods

IDA

Conclusions: Policy and Standards

- **Voluntary approaches do not work to increase accessibility**
- **Implementation is the elephant in the room – need to rethink policy and standards**
- **Minimal accessibility standards need to be supplemented by universal design to meet goals of the Convention**
- **Needs and resources vary significantly from place to place – Developed World approaches may not be feasible everywhere**

Conclusions: Policy and Standards

- **Needs are urgent in developing countries**
- **Large transportation demonstration projects can be catalyst but need follow through**
- **Pedestrian environments are critical in access to transportation**
- **High priority should be given to increasing accessibility in social housing programs**
- **New housing is not be the most effective solution for everyone**

Recommendations: Policy and Standards

- **Develop multi-tiered standards are needed:**
 - **Basic standards to develop capacity**
 - **Comprehensive standards to follow later**
 - **Universal design standards to encourage best practices**
- **Laws must include funding for follow through – education and enforcement**
- **Fund independent national commission and local action groups**

Recommendations: Policy and Standards

- **Develop international accessibility standards for refugee camps**
- **Develop international initiatives to address accessibility in informal settlements and rural areas**
- **Major transportation demonstrations should include funding for integrated system planning and capacity building**
- **Transportation infrastructure system improvements should include coordination with street right of way improvements**

Conclusions: Education and Capacity Building

- **In most countries, there are not enough knowledgeable professionals**
- **Design schools are not teaching accessibility and universal design**
- **Without professional education and technical assistance, professionals do not know what to do to comply with laws and standards**
- **Good demonstrations provide tangible evidence, build capacity and create a positive emotional response**

Recommendations: Education and Dissemination

- **Licensing and accreditation requirements in design and engineering fields should require knowledge of accessibility and universal design**
- **Bundle accessibility and universal design with sustainable design, affordability, smart growth and other innovations**
- **Develop tools to help plan integrated transportation solutions that address the entire travel chain**
- **Identify measurable economic and health benefits of aging in place**

Key Research Needs

- **Identify the economic and social benefits of accessibility in public accommodations, transportation and housing**
- **Learn more about the needs in low resource environments**
- **Identify economic and health benefits of aging in place**
- **Develop evidence base for standards**
- **Demonstrate the effectiveness of universal design**

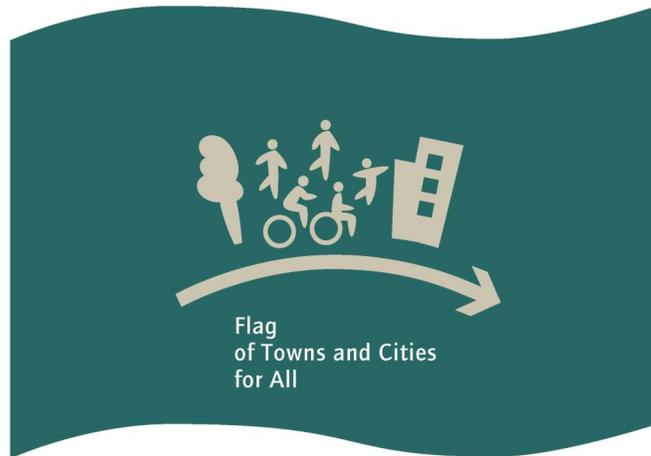

Key Development Needs

- **Develop very low cost accessible solutions for emergency housing, refugee camps, rural areas and informal settlements**
- **Develop low cost accessible public transportation alternatives, e.g. STS, shared cars, jitney service**
- **More examples of solutions to sensory and cognitive issues and on social participation**
- **Insure that smart products include universal design features**

Increasing Adoption of UD

Design for All Foundation

Increasing Adoption of UD

A screenshot of the GUDC website homepage. The header features a globe icon and the acronym "GUDC" in large white letters on a green background. Below the acronym, it reads "Global Universal Design Commission, Inc." and "Increasing usability, safety, health, and social participation through design". The main content area is divided into three columns: a "Main Menu" with links like Home, About Us, and Board of Directors; a "Welcome" section with a paragraph about GUDC's mission and a "User Login" form; and a "Search" box and a "News" section with a sub-heading "Early Adopters Recognized at Summit" and a short article snippet.
